Introduction

The GV-IP Speed Dome (GV-QSD5730-Outdoor) is an outdoor network PTZ camera that offers 33x optical zoom and 10x digital zoom, capable of showing smooth live view with great details. This camera can simultaneously deliver four video streams in resolutions up to 2592 x 1944 at 30 fps. The GV-QSD5730-Outdoor supports H.265 video codec to achieve better compression ratio while maintaining high quality pictures at reduced network bandwidths.

Wide surveillance coverage is made possible with 360° endless panning and -10°~100° tilting capacity. PTZ functions such as Preset, Auto Pan, and Patrol can be programmed and activated by schedule. The GV-QSD5730-Outdoor supports pan/tilt speeds ranging from a fast patrol of 400° and 300° per second to a slow ramble of 0.1° per second with 0.1° pan accuracy for fast and accurate tracking ability.

GV-QSD5730-Outdoor also features Servo Feedback and Electronic Image Stabilizer (EIS) technology. The Servo Feedback technology ensures the camera view returns to the previous position when encountering external force (e.g. human interference) or environmental vibration. EIS technology can effectively produce stable images by actively sensing directional movement of the images and compensating accordingly; this is particularly useful for cameras installed at places where environmental movement (e.g. strong wind, the passing-by heavy vehicles) is constant, and when high optical zoom is executed.

Note:

- 1. Do not use clothes or any ordinary material to clean the camera cover since they may result in scratches.
- 2. Mind the following when using an inserted memory card for recording:
 - Recorded data on the memory card can be damaged or lost if the data are accessed while the camera is under physical shock, power interruption, memory card detachment or when the memory card reaches the end of its lifespan. No guarantee is provided for such causes.
 - The stored data can be lost if the memory card is not accessed for a long period of time. Back up your data periodically if you seldom access the memory card.
 - Memory cards are expendable and their durability varies according to the conditions of the installed site and how they are used. Back up your data regularly and replace the memory card annually.
 - To avoid power outage, it is highly suggested to apply a battery backup (UPS).
 - For better performance, it is highly suggested to use SD card of MLC NAND flash, Class 10.
 - Replace the memory card when its read/write speed is lower than 6 MB/s or when the memory card is frequently undetected by the camera.
- 3. Specifications are subject to change without notice.
